

At their September 12, 2019 meeting, the LORCO board approved an amendment to LORCO Administrative Policy Section 102 (ADM 102) with the passage of Resolution 2019-45. The District's operation of the wastewater system may require it to place fixtures and/or equipment on a user's property, including but not limited to risers, cleanouts, meter vaults, meter sleeves, grinder pumps, and other fixtures/equipment. Other than damage caused by the ordinary and customary operations of the wastewater system, the user is responsible for all damage to or destruction of the fixtures/equipment on the user's property. Any sums due and owing for repair or replacement of such fixtures/equipment will be added to the user's regular bill for services.
